

Trea Turner vs Luis Severino – Scouting Report

	Notes
Severino	Facing RHH, Severino mainly uses Fastballs (4S & SI), and goes to Sweeper and SL. SW only in–zone 36% and if the danger pitch with a 43% whiff rate. Chased SW have a 64% whiff rate. SI is also a chase pitch, with a hard–hit rate of 9% on chased SI. Most successful pitch has been the Sweeper & SL (SW has xwOBA of .194 and ISO of .056). Both Sweeper & Cutter play in the zone with (.196/.248 xwOBA). First pitch typically starts off with a SI or 4S, then goes to off speed later. Put away pitch has been the SW, and on 2K counts rarely in the zone. Deeper into the count can expect a lot of SI. First pitch breaking balls to drop in the zone more than 50%, would not be surprised if he tries to steal a strike early. Most effective way of getting a whiff or chase would be to throw back to back SW, gets a chase 50% of the time on his 2nd SW. Consecutive breaking balls also elicit a chase by Turner 43% of the time. When behind tends to rely on fastballs in the zone. 4S tends to live on the upper–outer edge of the plate, but if he gets down, will bring it belt high. SI consistently lives belt high inside on RHH. SW will occasionally be thrown over the middle of the plate even when ahead. Overall would suggest heavy Sweeper usage even in–zone but away, and if you go to 4S put it up and in. Any SI that is in–zone will be hit well. Good approach would be to drop a Sweeper in the zone first pitch then back again with an outside Sweeper.
Turner	Facing RHP, Turner has nearly a 50% chase rate on Sweepers, but is able to stay away from outside fastballs. Struggles with the SW w/ a 44% whiff rate. 4S & SI both have a herd hit rate over 50%, and puts the SI in play nearly 60% of the time. Produces well vs 4S and Cutter, against the Cutter has been able to go for XBH, specifically in–zone. Getting Turner to chase should be the game plan as beating him in the zone is tough and he struggles against chased SL/SW. Does not swing too often at first pitch breaking balls including in–zone (25% Zone–Swing Rate on SW). After the first pitch, anything within the zone is going to be swung at. Does not chase early but will later in the count. First pitch 4S has a swing rate of 41% first time seeing, and goes down from there. When pitcher is behind, chases the Sweeper 88% of the time. Would be smart to utilize the SW if Severino goes down instead of a fastball, Turner has a .367 & .555 wOBA against pitcher behind 4S/SI. High whiff rate on up and in 4S as well as low & away Sweepers. Protects most of the zone well against the SI, in–zone SI belt high is going to be hit hard. Rarely puts a low SW in play, even with a miss on location, very low hard–hit rates. Overall would jump on the 1st pitch Sinker early, or wait for a 4S/Cutter to be dropped in the zone. Has the most success against FB, chasing an off speed will be the biggest risk to going down early but good plate protection will lead to zone fastballs.
