Manny Machado vs Max Fried – Scouting Report

	Notes
Fried	Facing RHH, Fried uses a lot of pitches but sticks w/ 4S/CH/CB/SI while mixing in other O/S pitches. Pitches hover the zone most of the time w/ CH and FC being lowest ~40% Zone %. The 4S does induce chase 33%, only 30% O–Whiff. BBs more tough to hit o–zone w/ CB, FC, SL, SW over 50% Chase–Whiff. CH/CB successful w/ below .300 xwOBA. SW used ~5% but has .032 xwOBA. Cutters have been weak point. Starts 4S/CB for PA will throw SI too less often. Early CH usage, CB/4S consistently toss up throughout PA. If behind, expect 4S i–zone. Early CH–o–zone. Any 0–2 pitch will likely be o–zone, deeper in count will continue to throw FBs in 2K counts. CU to 4S gets chase 40% of the time on 4S and 4S is in zone less than his AVG. zone ~50%. Chase pitch mainly CH, gets 26% chase on his SL. When he gets chase on SL/CB whiffs 62%/90%. 4S/CH have high–hard hit rates especially in–zone, BB not as much w/ O–zone CB in play 0%, SL O–Zone Hard–Hit 6%. W/ CB only used 6%, SL has been most successful w/ .258 xwOBA. 4S hit hard w/ .348 xwOBA. Little damage done when thrown o–zone all pitches have .000 O–ISO except SL w/ .023 ISO. Starts off w/ 4S or SL & both in–zone over 50%. Mixes 2K pitch choice w/ 4S/SL & both barely in zone. 2K SL in zone less than 20%. Behind FBs all in zone, Fried has .359 wOBA behind vs .186 ahead. Getting him behind means he brings 4S down, and CB actually starts to play up in–zone. Normally CB is low and away. Overall would try and drop CB in the zone to get ahead and go back with an O–Zone 4S. Utilize the SW/CB–watch when behind and in–zone.
Machado	Facing LHP, Machado has seen a lot of 4S, w/ a 23% whiff. Overall his chase rate is only 26%, but he does bite vs the CB 50% of the time. Would expect Fried to throw the CB and try and induce a whiff (55% Chase–Whiff on CB for Machado). Besides 4S/CB anything outside the zone does not hit the ball hard w/ a 0% chase hard–hit rate vs CH/FC/SI/SL/SW. Punishes the CH, zone–CH has .555 xwOBA and .429 ISO. CB only a .181 xwOBA & out of the zone even lower at .094. CHs out if he does chase another option. Machado gets a lot of 1st Pitch 4S swings at them 45% of the time. Anything in–zone (besides CB) will likely be swung at 1st pitch. Could be an opportunity to drop a CB in for a strike early. Will not chase early, as PA continues tends to stay away from 4S/SI/FC outside the zone especially in when he is ahead. The more times Machado faces a pitcher the more often he swings 1st pitch. High Velo to Low Velo gets Machado to chase 50% of the time. Fastball to CH gets the highest whiff rate of 40% but lowest chase of 21%. When the pitcher is ahead chases the CB and SI over 50% on CB he .000 wOBA. Definetly the pitch to use when ahead. Any fastball within the zone has possibility of beind hit hard. The deeper you get in the count, the higher chance you are going to see a zone fastball. If you do get ahead, anything in the zone would swing at as it will most likely be in the hot zone.
